## About

I am a researcher in applied cryptography at the ENCRYPTO research group at TU Darmstadt. My research focuses on how hiding of program details is cryptographically supported via Private Function Evaluation and cryptographic obfuscation. In my freetime, i play the pipe organ and develop videogames.

## Education

|                                  |             |
|----------------------------------|-------------|
| <b>TU Darmstadt</b>              | 2022 — 2025 |
| <i>M.Sc. in Computer Science</i> |             |
| ◦ Grade: 1.2                     |             |
| <b>TU Darmstadt</b>              | 2018 — 2022 |
| <i>B.Sc. in Computer Science</i> |             |
| ◦ Grade: 1.4                     |             |

## Employment

|                                                                                                                                                                                                                                                                                           |                                        |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------|
| <b>Doctoral Researcher</b>                                                                                                                                                                                                                                                                | <i>Darmstadt, Germany</i>              |
| <i>ENCRYPTO Research Group</i>                                                                                                                                                                                                                                                            | 2025 – present                         |
| <ul style="list-style-type: none"> <li>◦ Designing and implementing cryptographic protocols in Secure Multiparty Computation, Private Function Evaluation, Private Set Operations, etc.</li> <li>◦ Teaching “Cryptographic Protocols” Course and supervising student’s theses.</li> </ul> |                                        |
| <b>Student Research Assistant</b>                                                                                                                                                                                                                                                         | <i>Darmstadt, Germany</i>              |
| <i>ENCRYPTO Research Group</i>                                                                                                                                                                                                                                                            | 2021 – 2024                            |
| <ul style="list-style-type: none"> <li>◦ Implemented protocols for Private Function Evaluation, Secure Multiparty Computation, and more. Contributed to scientific writing and benchmarking.</li> </ul>                                                                                   |                                        |
| <b>Student Teaching Assistant</b>                                                                                                                                                                                                                                                         | <i>Darmstadt, Germany</i>              |
| <i>ENCRYPTO, CAC, CRYPTOPLEXITY</i>                                                                                                                                                                                                                                                       | Summer 2021, 2024<br>Winter 2021, 2022 |
| <ul style="list-style-type: none"> <li>◦ Assisted in teaching the courses “Formale Methoden im Software Entwurf”, “Einführung in die Kryptographie”, and “Cryptographic Protocols”.</li> </ul>                                                                                            |                                        |
